

Employee User Guide

Pezon Construction Draw Tracker

A shared workspace for managing construction draw requests, contractor updates, invoices, photos, eBudget line items, inspection status, lender requirements, and holdback balances.

What this tool helps with

The tracker helps the team see which draw requests are ready, which items are missing, what still needs follow-up, and what should be reviewed before a lender package is submitted.

Use this guide when uploading documents, adding photo evidence, reviewing AI extraction, updating draw details, and preparing a clean package for submission.

1. Quick Start

Use the live tracker link shared by Pezon Properties. Sign in with your company email and password. The tracker is intended for @pezonproperties.com users only, and activity is recorded so the team can see who made updates.

Recommended first-time setup

Create your account once, confirm your email if prompted, then sign in with email and password. After that, use the same login each time so edits are tied to your name.

Daily workflow

- Open the dashboard and review the summary cards: requested amount, ready draws, missing documents, and remaining holdback.
- Click a draw request to review details, lender requirements, budget comparison, photo evidence, and follow-up items.
- Upload documents or photos, review AI findings, correct any extracted values, then save changes.
- Use the Download report button when you need a quick draw summary for review or a meeting.

Area	Purpose	When to use it
Dashboard	Shows portfolio-level draw readiness.	Start here each day.
Draws	Lists all active draw requests.	Select the draw you want to review.
Requirements	Shows lender package checklist.	Find missing invoice, waiver, inspection, or eBudget items.
Photos	Stores visual evidence for work completed.	Upload jobsite photos, invoice screenshots, inspection images, and progress evidence.
Follow-up	Shows open tasks before submission.	Use this before sending a draw package.

2. Understanding Draw Readiness

Each draw request receives a status based on its documentation, budget match, completion update, inspection status, and holdback information. Treat the AI recommendation as a starting point. A person should still review the package before submission.

Status	Meaning	Action
Ready	The draw appears supported by required documentation and is within budget rules.	Review one final time, then prepare the lender package.
Needs docs	The draw is close, but something is missing or needs confirmation.	Open Requirements and Follow-up. Add the missing invoice, waiver, photo, eBudget match, or inspection detail.
Blocked	The draw should not be submitted yet. It may be over budget, missing critical documentation, or have an inspection issue.	Resolve the blocking issue before submitting. Keep holdback unreleased if inspection or documentation is not clean.

Key fields to verify

- Submitted construction budget - the approved construction budget for the project.
- Approved amount and approved date - the amount already approved by the lender and when it was approved.
- Remaining budget - the construction budget still available after prior draw activity.
- Expected next draw request date - usually pulled from the executed contractor Scope of Work milestone date.
- Holdback total and eligible holdback - confirm before releasing funds.

Important

AI can read documents and photos, but it should not replace human review. Always verify dollar amounts, dates, property names, inspection status, and lender requirements before submission.

3. Uploading Documents and Photos

There are two upload locations. They do different jobs.

Upload location	Use it for	What happens next
Upload doc/photo at the top	Starting from a source file such as a draw package, SOW, invoice, inspection report, approval PDF, Word doc, or photo.	Creates a new editable draw draft and sends the file to AI for extraction.
Add photo inside Photo Evidence	Adding visual proof to the currently selected draw request.	Attaches the image to that draw, marks photo evidence as received, and sends the image to AI for review.

Supported file types

- Documents: PDF, DOC, DOCX.
- Images: JPG, PNG, WEBP, HEIC, HEIF.
- Recommended file size: under 12 MB.
- Use clear scans and photos. Cropped, blurry, dark, or sideways files reduce extraction accuracy.

After upload

- Wait for the AI status to change from Analyzing to Complete or Needs review.
- If AI completes, review the extracted fields and correct anything that is wrong or blank.
- If AI says Needs review, the draft is still editable. Enter the information manually and save.

4. Reviewing and Editing AI Results

AI extraction is meant to reduce typing and catch missing documentation. It reads uploaded source files and tries to populate the draw record. The team remains responsible for final accuracy.

Fields AI may extract

- Contractor and property name.
- Draw number, SOW milestone, or billing period.
- Requested amount, approved amount, budget line total, and remaining budget.
- Completion percentage and inspection status.
- Expected next draw request date from the executed SOW when visible.
- Lender requirement checklist, photo evidence notes, and follow-up items.

How to edit a draw

- Select a draw from the draw queue.
- Use the editable Draw Details section to correct contractor, property, milestone, amounts, completion, inspection, and holdback.
- Tab out of a field or click elsewhere to save the field change.
- Click Save changes when you are done reviewing the project summary or want to force a save.

Best practice

If the AI extracts a value from a photo or document, compare it against the original source before relying on it. For lender submissions, exact amounts and dates matter.

What Photo Evidence is for

- Showing visual support that work was completed.
- Tracking whether photos cover the right rooms, systems, exterior areas, or repair items.
- Uploading invoice screenshots or inspection photos that support a draw request.
- Helping AI identify whether the photo proves enough for the lender requirement.

5. Preparing a Clean Draw Package

Before a draw is submitted, use this checklist to make sure the package is complete and easier for the lender to approve.

Check	What to confirm
Invoice	Contractor invoice is uploaded or recorded, and the requested amount matches the draw request.
Photos	Photo evidence shows the completed work and is attached to the correct draw.
eBudget line	Requested amount is mapped to the correct budget line and is not over the approved line without approval.
Inspection	Inspection status is current. Failed, pending, or partial inspections should be handled before submission.
Lien waiver	Conditional lien waiver is received or clearly listed as missing.
Holdback	Holdback total, eligible release, and remaining holdback are reviewed before payment release.
Next draw date	Expected next draw request date comes from the executed SOW milestone date when available.

Helpful buttons

- Search - jumps to the search box so you can find a contractor, property, document, status, or budget line.
- Download report - downloads a readable draw summary report for meetings or review.
- New draft - creates a blank editable draw request.
- Reset sample - restores the 3606 Springer Street demo data. Use carefully in a shared workspace.

6. Team Rules and Troubleshooting

Because everyone sees the same shared tracker, small habits help keep the workspace clean and trustworthy.

Team rules

- Use your own Pezon Properties login so activity shows your name.
- Do not overwrite another person's update unless you have confirmed the correct information.
- Use Follow-up items to show what is still missing instead of hiding incomplete work.
- Keep the selected draw accurate before uploading photos into Photo Evidence.
- If a number is uncertain, leave a note or follow-up rather than guessing.

Troubleshooting

Issue	What to do
Upload says Needs review	AI could not complete extraction or the OpenAI key may not be configured. The draft is still editable.
Email sign-in problem	Confirm you are using an @pezonproperties.com email. If needed, use Forgot password or ask an admin to check Supabase auth settings.
Photo looks unclear	Retake the photo with better lighting, closer framing, and the relevant work visible.
Amounts look wrong	Open the source file and manually correct the editable fields before saving.
Wrong draw selected	Click the correct draw in the Draws list before adding photo evidence.

Final reminder

The tracker is designed to make draw requests cleaner and easier to manage. It does not remove the need for final human review before submitting to a lender.
